

World Ozone Day 2023 on 16th September 2023.

Report

Under the auspices of the Physics Department, all science students of Sao Chang College Tuensang, Nagaland, commemorated World Ozone Day on September 16, 2023, with a dedicated event held in the college grounds. As part of the program, a One Act Play was performed by the students, centred on the theme "Montreal Protocol: Healing the Ozone Layer and Mitigating Climate Change." Through this theatrical presentation, the students conveyed the critical message of preserving the ozone layer. They highlighted the potential consequences of ozone depletion, such as increased exposure to harmful UV radiation leading to various health issues like skin diseases, cancer, sunburns, cataracts, and premature aging.

Moreover, the play emphasized the role of substances like Chlorofluorocarbons (CFCs), Halons, and Methyl bromide in thinning the ozone layer, attributing its depletion primarily to human activities over several decades. Furthermore, the performance highlighted actionable steps that can be taken by nations, organizations, and individuals to preserve and restore the ozone layer. These include advocating for the adoption of environmentally friendly practices and policies, reducing the use of ozone-depleting substances, and promoting international agreements like the Montreal Protocol.

Ms. Tsuyimla K Yimchunger, a dedicated 5th-semester B.Sc student, chaired the program with grace and leadership, ensuring its smooth execution. Dipak Nath, Head of the Physics Department, delivered a heartfelt vote of thanks, expressing gratitude to all participants and organizers for their efforts in making the event impactful.

Approximately 100 participants, comprising students, teachers, and the Principal Incharge, actively engaged in the program, reflecting the community's collective commitment to environmental stewardship and global awareness. The event not only educated attendees but also inspired them to take concrete actions in safeguarding the ozone layer for future generations.
